

METRANS INTRODUCES THE
EXECUTIVE

LIMITED EDITION VEHICLE CUSTOMIZED SPECIFICALLY FOR EXECUTIVES

FOR MORE INFO, VISIT www.metransport.com OR CALL TOLL FREE TODAY! **888-597-2668**

Limited Edition Vehicle • Tailored to Your Custom Specifications

Top Speed in Excess of 20 MPH!

The **Executive** is an extremely Limited Edition Vehicle, designed and manufactured exclusively to meet customer specifications for a custom order. No two **Executive** Vehicles will ever be the same.

An **Executive** customer is part of a unique group of individuals that knows what they want and demands nothing less.

We offer options limited only by the customer's imagination!

Examples: Cell Phone Holder/Charger, GPS, RFID, Stereo System, etc.

Luxury, Executive Features • Unmatched Maneuverability and Speed

Easily
Fits Through
Doorways
and in
Elevators!

The **Executive** is designed to provide an entirely new mode of transport for individuals requiring safe, fast travel in confined areas, indoors and outside. The **Executive** is the perfect solution for offices, factories, warehouses and travel—virtually anywhere a person can walk, including regular doors and elevators!

Being easily transportable, electric powered and having a range of 40 miles with two onboard, dedicated 12volt power sources, the **Executive** is a great solution for visiting broad geographic areas without the need to use regular vehicles and golf cart style industrial vehicles. Plus, the **Executive** has on-board 110/220 volt recharging with an average total recharge time under 45 minutes!

The **Executive** has similar specifications to the METrans MT700.01, with the following added features:

- Polished Stainless Steel
- Italian Leather Seat and Hand Grip Wraps
- Top speed in excess of 20mph (32.187kph)
- A stunning, high gloss black finish

The **Executive** addresses a customer specified need for a fast, highly maneuverable, small, dedicated Executive Vehicle. Its small scale and versatility permits previously nonexistent mobility, maneuverability, and independence in various environments.

Easily Folds Down for Transport in SUVs, Trucks and Corporate Jets

Folds
For Easy
Transport!

METrans designed the **Executive** for easy transport to any destination in virtually any SUV or Pickup truck.

Based on customer input, the **Executive** was designed so it can be folded down to dimensions that fit many cargo doors and luggage compartments of private planes, including corporate jets.

The **Executive** is easily portable, with a total weight of just 237 lbs! With the steering tiller folded down and the seat post removed, net dimensions are only 42" long, 25" wide and 19" tall. It also features a carrying handle in the front and rear bumper, which makes it easily transportable by two men.

Special Features of the METrans Executive

The **Executive** has the same size and weight specifications as the “Standard” MT700.01 Vehicle. Please refer to our Vehicle Brochure and website, www.metransport.com, for detailed specifications and descriptions of the **Executive** and its general capabilities.

The **Executive** provides exceptional performance in a reliable, personal executive vehicle, while maintaining mobility and maneuverability, all packaged in a very small foot print.

The differences in the Executive over the MT700.01 are as follows:

- 1** Polished stainless steel and a stunning, high gloss black finish for a distinguished Executive appearance.
- 2** Greater Top Speed—in excess of 20 MPH!
- 3** Italian Leather Seat and Hand Grip Wraps— Providing added comfort for the Executive Operator

The **Executive** represents another example of the METrans customer driven approach to developing Vehicles and Cart/Trailers that respond to specific missions.

The **Executive** can also be paired with any of the highly maneuverable Cart/Trailer solutions offered by METrans, which provide added versatility, volume and weight carrying capacity.

METrans constantly works to broaden its value proposition in diverse working environments. If a Customer can specify a need, METrans will design and build Vehicle modifications and/or a mission specific Cart/Trailer to directly respond to the Customer’s specification.
